APP STORE TREND & PROFIT ANALYSIS

Common Trends among Google play store and Apple store datasets

After performing EDA on both **Google Play Store** and **Apple Store** datasets, the following common patterns were observed:

1. **Free Apps Lead in Both Markets**
   - Majority of apps in both datasets are **free**
   - Users prefer downloading apps without cost

   Observation from Analysis: Free apps achieve **higher downloads and wider reach**

2. **High Reviews is equal to High Engagement**
   - Apps with large installs also have **high number of reviews**
   - Indicates **active user engagement**

   Observation from Analysis: Reviews Boost App Visibility

3. **Games Dominate Across App Categories**
   - In the **Apple Store**, *Games* is the **top genre**
   - In the **Google Play Store**, *Games* is among the **top categories (2nd after Family)**

   Observation from Analysis: Games is the most **common and comparable category** in both datasets.

APP STORE TREND & PROFIT ANALYSIS

4. **High Ratings (Above 4.0) Are Common**
   - Most apps in both datasets have ratings between 4.0 – 4.5
   - Highly rated apps are more likely to:
     - Attract users
     - Retain users

Observation from Analysis: Apps with **high ratings indicate better user satisfaction**, which is essential for success.

5. **Weak Correlation Between Reviews and Ratings**
   - Correlation analysis shows weak relationship
   - A High Number of Reviews Does Not Necessarily Correlate with High Ratings

Observation from Analysis: Popularity does not necessarily reflect quality, indicating that widely used apps may not always provide the best user experience.

Most Profitable App Profile

Based on common trends, the most profitable app profile in both markets is:

- **Category:** Games / Entertainment
- **Type:** Free
- **Rating:** Above 4.0
- **Engagement:** High reviews and installs

Justification

This app profile is profitable because:

1. **Massive User Reach**
   - Games attract millions of users across both platforms
2. **Strong User Involvement**
   - Users spend more time on gaming apps
3. **High Revenue Potential**
   - Free apps generate revenue primarily through advertising and in-app purchases, enabling monetization while maintaining a large user base.
4. **Visibility & Growth**
   - High ratings and reviews improve app ranking
   - Builds user trust and credibility

APP STORE TREND & PROFIT ANALYSIS

Final Conclusion:

- Based on the exploratory data analysis of both the Google Play Store and Apple Store datasets, several common trends were identified across the two platforms.
- The analysis shows that the Games category is one of the most dominant and consistent categories in both markets, despite differences such as the broader Family category ranking higher in the Google Play Store.
- Additionally, most successful apps maintain high user ratings (above 4.0), indicating strong user satisfaction. Free apps significantly outnumber paid apps on both platforms, suggesting that users prefer applications with no upfront cost. Furthermore, apps with a higher number of reviews reflect strong user engagement, although the correlation between reviews and ratings remains relatively weak.
- Based on these observations, the most profitable app profile across both markets is a free app in the Games or Entertainment category with high ratings and strong user engagement.
- Such apps attract a large user base and generate revenue through monetization strategies like advertisements and in-app purchases, making them highly successful in both ecosystems.
